Purpose

This document contains some supporting documents which may be used in the NMC Test of Competence (ToC 21). It is intended for candidates to have the opportunity to become familiar with these supporting documents prior to them taking the ToC 21.

T.E.D.™ Anti-Embolism Stockings

DVT Prevention for your patient

How to Measure

Studies that proved the clinical effectiveness of T.E.D.™ anti-embolism stockings used thigh length styles. Select thigh length wherever possible unless knee length is more appropriate to patient condition.

- 1 Measure Upper Thigh Circumference
If thigh circumference is less than 91.4cm, choose: Thigh length or Thigh length with belt
 - 2 Measure Calf Circumference at greatest point
 - 3 Measure distance from Buttock Fold to Heel
- If Upper Thigh Circumference is 91.4cm or more choose: Knee length*
- 2 Measure Calf Circumference at greatest point
 - 3 Measure distance from behind Knee to Heel

Fitting Guide

Put hand inside stocking and grab heel pocket.

Pull stocking inside out.

Place stocking over foot. Align inspection toe hole to fall under toes. Ensure patient's heel is centred in the heel pocket.

After calf portion is applied start rotating stocking inward where the break in pressure occurs, so that the gusset is placed over the femoral artery (slightly towards the inside of the thigh). The stitch change in the thigh length should be positioned 3-5cm below knee (for knee length style, position top 3-5cm below knee).

Download the **FREE T.E.D.™ APP** and discover sizing and application procedures.

For healthcare professionals only. Important information: Prior to use, refer to the instructions for use supplied with this device for indications, contraindications, side effects, suggested procedure, warnings and precautions. As part of its continuous product development policy, Cardinal Health reserves the right to change product specifications without prior notification. Selection Guide

Thigh length Style

Thigh Circumference 1	Calf Girth 2	Leg Length 3	Code	Size	Colour	Toe	Top
Less than 63.5cm	Less than 30.5cm Small	Less than 74cm Short	3071LF	A			
		74cm to 84cm Regular	3130LF	B			
		84cm or more Long	3222LF	C			
		Less than 74cm Short	3310LF	D			
		74cm to 84cm Regular	3416LF	E			
	30.5 to 38cm Medium	84cm or more Long	3549LF	F			
		Less than 74cm Short	3634LF	G			
		74cm to 84cm Regular	3728LF	H			
		84cm or more Long	3856LF	J			
		Less than 74cm Short	4010LF	K			
63.5 to 81.3cm	38 to 44.5cm Extra Large	74cm to 84cm Regular	4114LF	L			
		84cm or more Long	4216LF	M			
63.5 to 81.3cm	44.5 to 54.6cm Extra Large Plus	Less than 74cm Short	3180LF	N			
		74cm to 84cm Regular	3181LF	P			
		84cm or more Long	3182LF	Q			
		Less than 74cm Short	3183LF	R			
81.3 to 91.4cm	54.6 to 66cm Extra Extra Large	74cm to 84cm Regular	3184LF	S			
		84cm or more Long	3185LF	T			

IMPORTANT - to ensure your patient gets the right levels of compression, it is essential to take accurate measurements. By following the measuring guide you will be able to select the correct style and size of stocking.

Thigh length with Belt Style

Thigh Circumference 1	Calf Girth 2	Leg Length 3	Code	Size	Colour	Toe	Top
Less than 63.5cm	Less than 25cm Extra Small	Less than 71cm Regular	3306	-			
		71cm & more Long	3320	-			
		25 to 30.5cm Small	3039-	A+			
		72cm & more Long	3364	B+			
		30.5 to 38cm Medium	3144	C+			
	38 to 44.5cm Large	72cm & more Long	3449	D+			
		Less than 74cm Regular	3221	E+			
		74 cm & more Long	3523	F+			
		Less than 72cm Regular	3922	G+			
		72cm & more Long	3995	H+			
63.5 to 81.3cm	38 to 44.5cm Extra Large						

Stockings should be laundered every 2 to 3 days, unless soiled (in case they should be cleaned/replaced immediately). Laundering increases the length of service by removing body secretions from the elastic threads.

Knee length Style

Calf Girth 2	Leg Length 3	Code	Size	Colour	Toe	Top
Less than 30.5cm Small	Less than 41cm Regular	7071-	A-			
	41cm & more Extra Long	7339	B-			
30.5 to 38cm Medium	Less than 43cm Regular	7115	C-			
	43cm & more Extra Long	7480	D-			
38 to 44.5cm Large	Less than 46cm Regular	7203-	E-			
	46cm & more Extra Long	7594	F-			
44.5 to 51cm Extra Large	Less than 46cm Regular	7604-	G-			
	46cm & more Extra Long	7802-	H-			
51 to 58.4cm Extra Extra Large	Less than 46cm Regular	7470LF	J-			
	46cm & more Extra Long	7471LF	K-			
58.4 to 66cm Extra Extra Large	Less than 46cm Regular	7472LF	L-			
	46cm & more Extra Long	7473LF	M-			

CONTRA-INDICATIONS: Massive oedema of leg or pulmonary oedema from congestive heart failure; severe arteriosclerosis or other ischaemic vascular disease; extreme deformity of the leg. Any local leg conditions in which stockings would interfere, such as:

- 1) Dermatitis
- 2) Vein Ligation (immediate postoperative)
- 3) Gangrene
- 4) Recent Skin Graft

Community Medication Prescription and Administration Record

PRESCRIBED OXYGEN						
For most chronic conditions, oxygen should be prescribed to achieve a target saturation of 94–98% (or 88–92% for those at risk of hypercapnic respiratory failure i.e. CO ₂ retainers.)						
Is the patient a known CO ₂ retainer? Yes ☐ No ☐						
Continuous oxygen therapy	☐	If oxygen is in progress, check and record flow rate (FR) during clinical observations.				
'When required' oxygen therapy	☐					
Target O ₂ saturation 88-92%	☐					
Target O ₂ saturation 94-98%	☐					
Other saturation range: _____ Saturation not indicated e.g. end-of-life care (state reason) _____	☐					
Starting device and flow rate:		Administrator's signature:	Print name:	Date	Time	FR/D
	Start date:					
Prescriber's signature:	Stop date:					
Print name:	Pharmacy check:					
Codes for starting device and modes of delivery						
Air not requiring oxygen or weaning or PRN oxygen	A	Humidified oxygen at 28% (add% for other flow rate)				H28
Nasal cannula	N	Reservoir mask				RM
Simple mask	M	Tracheostomy mask				TM
Venturi 24	V24	Venturi 35				V35
Venturi 28	V28	Venturi 40				V40
Venturi 60	V60	Patient on CPAP system				CP
Patient on NIV system	NIV	Other device (specify)

Royal College of Physicians National Early Warning Score 2 (NEWS2) © Royal College of Physicians December 2022

Chart 4: Clinical response to the NEWS trigger thresholds

NEW score	Frequency of monitoring	Clinical response
0	Minimum 12 hourly	Continue routine NEWS monitoring
Total 1–4	Minimum 4–6 hourly	- Inform registered nurse, who must assess the patient - Registered nurse decides whether increased frequency of monitoring and/or escalation of care is required
3 in single parameter	Minimum 1 hourly	Registered nurse to inform medical team caring for the patient, who will review and decide whether escalation of care is necessary
Total 5 or more Urgent response threshold	Minimum 1 hourly	- Registered nurse to immediately inform the medical team caring for the patient - Registered nurse to request urgent assessment by a clinician or team with core competencies in the care of acutely ill patients - Provide clinical care in an environment with monitoring facilities
Total 7 or more Emergency response threshold	Continuous monitoring of vital signs	- Registered nurse to immediately inform the medical team caring for the patient – this should be at least at specialist registrar level - Emergency assessment by a team with critical care competencies, including practitioner(s) with advanced airway management skills - Consider transfer of care to a level 2 or 3 clinical care facility, ie higher-dependency unit or ICU - Clinical care in an environment with monitoring facilities

	Feeding reluctantly						1					

Newborn Early Warning Track and Trigger (NEWTT2)

How to use the NEWTT2 track and trigger tool to determine the level and timelines of escalation
Calculate and document the total NEWTT2 score for a set of observations by adding together the individual scores (0-2) for every individual observation entered in a single column of the chart
Check the total against the NEWTT2 escalation tool and follow instructions in the escalation table for that set of observations
Healthcare professional concern can initiate a neonatal review at any time regardless of the zone colour of an observation or total score
For a score of zero continue routine care

Thresholds and Triggers					
• The grade of team member indicated as the primary contact for each level of clinical concern is a guide and may need to be adapted depending on the local skill mix within that care setting or organisation					
	Score 1	Score 2-3	Score 4-5	Score ≥6	Any critical observation
	Inform shift leader - Consider SpO ₂ +/- blood glucose if not done already				
Primary escalation and response (use SBAR framework)	Repeat observations in <1 hour	Refer to paediatric/ neonatal Tier 1 doctor/ANNP	Refer to paediatric/ neonatal Tier 1 doctor/ANNP	Refer to paediatric/ neonatal Tier 1 doctor/ANNP. The Tier 2 doctor/ ANNP should be informed	Refer to paediatric/ neonatal Tier 1 doctor/ANNP AND Tier 2 doctor/ANNP
Review timings	Escalate as for score 2-3 if the repeat score remains 1	Request a review within 1 hour	Request a review within 15 minutes	Request immediate review	Immediate review and consider neonatal emergency call (2222)
Take steps to manage/address any obvious concerns/problems					
Secondary contact	If no review within expected time frame, escalate to Tier 2 doctor/ANNP and inform shift leader			If no review within expected time frame, escalate to consultant and inform shift leader	
	If still no response within required time frame, escalate to consultant				
• When the primary team member(s) contacted is unable to attend or fails to attend within the expected time for the level of clinical concern, escalation to the secondary contact is required					
• The secondary contact would be expected to attend within the initial review timing, calculated from the documented time of primary escalation.					

SBAR Handover	
S	Situation
B	Background

Does your patient have any additional risk factors?		☐ NOT APPLICABLE
Risk Factor	THRESHOLD	Vital sign
☐ Baseline vital signs outside of normal reference ranges	Always record the relevant P/V/W values even if they are normal	Patient's normal value:
☐ Tracheostomy/Airway risk	Do you need additional help in an airway emergency?	
☐ Invasive/Non-Invasive Ventilation/High Flow	Check oxygen requirement on additional respiratory support. Remember High Flow/EPAP and CPAP scores maximum of 4 on oxygen delivery	
☐ Neuromuscular/Intoxication/poisoned	Speech recognition and escalation has a lower threshold	
☐ <16 weeks gestation conjoined	Seizure recognition and escalation has a lower threshold between hypothermal	
☐ Neurological condition (ie meningitis, seizures)	Remember to check pupillary response if anything other than Alert on AVPU	
☐ Outdoor	Do you need support from home wearman?	

This chart is solely intended for recording an impatient paediatric patient's PEWS. The components of the chart should not be amended.

Guidance for using Modified Obstetric Early Warning Score Chart

A – Alert	Alert and orientated
V – Voice	Drowsy but answers to name or some kind of response when addressed
P – Pain	Rousable with difficulty but makes response when shaken or mild pain is inflicted (e.g. rubbing sternum, pinching ears)
U - Unresponsive	No response to voice, shaking or pain

Pain scores: Record pain levels as follows:

- 0 – No pain
- 1 – Mild pain
- 2 – Moderate pain
- 3 – Severe pain

Scoring and responding: Document all the scores for all parameters at bottom of the chart. Follow the escalation algorithm.

Generalized Anxiety Disorder 7-item (GAD-7) scale

Generalized Anxiety Disorder 7-item (GAD-7) scale

Patient Name: _____	DOB: _____			
NHS Number: _____	Date: _____			

Over the last 2 weeks, how often have you been bothered by the following problems?	Not at all sure	Several days	Over half the days	Nearly every day
1. Feeling nervous, anxious, or on edge	0	1	2	3
2. Not being able to stop or control worrying	0	1	2	3
3. Worrying too much about different things	0	1	2	3
4. Trouble relaxing	0	1	2	3
5. Being so restless that it's hard to sit still	0	1	2	3
6. Becoming easily annoyed or irritable	0	1	2	3
7. Feeling afraid as if something awful might happen	0	1	2	3
<i>Add the score for each column</i>	+	+	+	
Total Score (add your column scores) =				

If you checked off any problems, how difficult have these made it for you to do your work, take care of things at home, or get along with other people?

Not difficult at all _____

Somewhat difficult _____

Very difficult _____

Extremely difficult _____

Scoring

Scores of 5, 10, and 15 are taken as the cut-off points for mild, moderate and severe anxiety, respectively. When used as a screening tool, further evaluation is recommended when the score is 10 or greater.

Using the threshold score of 10, the GAD-7 has a sensitivity of 89% and a specificity of 82% for GAD. It is moderately good at screening three other common anxiety disorders - panic disorder (sensitivity 74%, specificity 81%), social anxiety disorder (sensitivity 72%, specificity 80%) and post-traumatic stress disorder (sensitivity 66%, specificity 81%).

Source: Spitzer RL, Kroenke K, Williams JBW, Lowe B. A brief measure for assessing generalized anxiety disorder. Arch Intern Med. 2006;166:1092-1097.

INTERPRETING THE GAD-7

SCORE	RISK LEVEL	INTERVENTION
0-4	No to Low Risk	None
5-9	Mild	Provide general feedback, repeat GAD-7 at follow-up, consider adjusting treatment plan if not improving in last 4 weeks.
10-14	Moderate	Further evaluation recommended; For active treatment plans consider adjustment; For text therapy clients, monitor for synchronous therapy.
15+	Severe	Adjust treatment plan; focused assessment of safety plan and pharmacotherapy evaluation/re-evaluation; If emergent need then consider referral to higher level of care; Client is not a good candidate for text therapy/asynchronous.

Glasgow Depression Scale Questionnaire

Glasgow Depression Scale Questionnaire

Name:

Instructions:

- Each question should be asked in two parts.
First, the participant is asked to choose between a 'yes' and 'no' answer.
If their answer is 'no', then the score in the 'no' column should be recorded as ('0').
If their answer is 'yes', they should be asked if that is 'sometimes' or 'always', and the score recorded as appropriate.
- Supplementary questions (*italics*) may be used if the primary question is not understood completely.
- If a response is unclear, ask for specific examples of what the participant means, or talk with them about their answer until you feel able to score their response.

Introduction:

To establish a frame of reference for 'In the last week...' remind the person about a specific event that happened 1 week ago that can serve as a reference point.

Start the interview by saying:

'I am going to ask you about how you have been feeling in the past week or since [state specific event from 1 week ago].'

In the last week...	Never/No	Sometimes	Always/ A lot
1. Have you felt sad? <i>Have you felt upset?</i> <i>Have you felt miserable?</i> <i>Have you felt depressed?</i>	0	1	2
2. Have you felt as if you are in a bad mood? <i>Have you lost your temper?</i> <i>Have you felt as if you want to shout at people?</i>	0	1	2
3. Have you enjoyed the things you've done? <i>Have you had fun?</i> <i>Have you enjoyed yourself?</i>	2	1	0
4. Have you enjoyed talking to people and being with other people? <i>Have you liked having people around you?</i> <i>Have you enjoyed other people's company?</i>	2	1	0
5. Have you made sure you have washed yourself, worn clean clothes, brushed your teeth and combed your hair? <i>Have you taken care of the way you look?</i> <i>Have you looked after your appearance?</i>	2	1	0
6. Have you felt tired during the day? <i>Have you gone to sleep during the day?</i> <i>Have you found it hard to stay awake during the day?</i>	0	1	2
7. Have you cried?	0	1	2
8. Have you been able to pay attention to things like watching TV? <i>Have you been able to concentrate on things (like TV shows)?</i>	2	1	0
9. Have you found it hard to make decisions? <i>Have you found it hard to decide what to wear, or what to do?</i> <i>Have you found it hard to choose between two things?</i>	0	1	2
10. Have you found it hard to sit still? <i>Have you fidgeted when you are sitting down?</i> <i>Have you been moving around a lot, like you can't help it?</i>	0	1	2
11. Have you been eating too little or eating too much? <i>Do people say you should eat more or less?</i> <i>[positive response for eating too much or too little is scored]</i>	0	1	2
12. Have you found it hard to get a good night's sleep? <i>Have you found it hard to fall asleep at night?</i> <i>Have you woken up in the middle of the night and found it hard to get back to sleep?</i> <i>Have you woken up too early in the morning?</i>	0	1	2
13. Have you felt that life is not worth living? <i>Have you wished you could die?</i> <i>Have you felt you do not want to go on living?</i>	0	1	2
14. Have you felt as if everything is your fault? <i>Have you felt as if people blame you for things?</i> <i>Have you felt that things happen because of you?</i>	0	1	2

In the last week...		Never/No	Sometimes	Always/ A lot
15.	Have you felt that other people are looking at you, talking about you, or laughing at you? <i>Have you worried about what other people think of you?</i>	0	1	2
16.	Have you become very upset if someone says you have done something wrong or you have made a mistake? <i>Do you feel sad if someone disagrees with you or argues with you?</i> <i>Do you feel like crying if someone disagrees with you or argues with you?</i>	0	1	2
17.	Have you felt worried? <i>Have you felt nervous?</i> <i>Have you felt tense/wound up/on edge?</i>	0	1	2
18.	Have you thought that bad things keep happening to you? <i>Have you felt that nothing nice ever happens to you anymore?</i>	0	1	2
19.	Have you felt happy when something good happened? <i>If nothing good has happened in the last week then ask: If someone gave you a nice present, would that make you happy?</i>	2	1	0

SCORING INSTRUCTIONS

Note: At the conclusion of the interview, add up the scores. If you calculate a score of 13 or greater, please do one of the following:

1. seek a referral to the individual's general practitioner; or
2. seek the consultation of the psychologist on the interdisciplinary team.

Glasgow Anxiety Scale for People with an Intellectual Disability

Glasgow anxiety scale for people with an intellectual disability (GAS-ID)

Questions		Never	Sometimes	Always
Worries				
1	Do you worry a lot?	0	1	2
2	Do you have lots of thoughts that go round in your head?	0	1	2
3	Do you worry about your parents/family?	0	1	2

BAPEN

Advancing Clinical Nutrition

'Malnutrition Universal Screening Tool'

MAG

Malnutrition Advisory Group
A Standing Committee of BAPEN

BAPEN is registered charity number 1023927 www.bapen.org.uk

'MUST'

'MUST' is a five-step screening tool to identify **adults**, who are malnourished, at risk of malnutrition (undernutrition), or obese. It also includes management guidelines which can be used to develop a care plan.

It is for use in hospitals, community and other care settings and can be used by all care workers.

This guide contains:

- A flow chart showing the 5 steps to use for screening and management
- BMI chart
- Weight loss tables
- Alternative measurements when BMI cannot be obtained by measuring weight and height.

The 5 'MUST' Steps

Step 1

Measure height and weight to get a BMI score using chart provided. *If unable to obtain height and weight, use the alternative procedures shown in this guide.*

Step 2

Note percentage unplanned weight loss and score using tables provided.

Step 3

Establish acute disease effect and score.

Step 4

Add scores from steps 1, 2 and 3 together to obtain overall risk of malnutrition.

Step 5

Use management guidelines and/or local policy to develop care plan.

Please refer to *The 'MUST' Explanatory Booklet* for more information when weight and height cannot be measured, and when screening patient groups in which extra care in interpretation is needed (e.g. those with fluid disturbances, plaster casts, amputations, critical illness and pregnant or lactating women). The booklet can also be used for training. See *The 'MUST' Report* for supporting evidence. Please note that 'MUST' has not been designed to detect deficiencies or excessive intakes of vitamins and minerals and is of **use only in adults**.

Step 1 – BMI score (& BMI)

Note : The black lines denote the exact cut off points (30,20 and 18.5 kg/m²), figures on the chart have been rounded to the nearest whole number.

Step 1

BMI score

BMI kg/m ²	Score
>20(>30 Obese)	= 0
18.5-20	= 1
<18.5	= 2

+

Step 2

Weight loss score

Unplanned weight loss in past 3-6 months	
%	Score
<5	= 0
5-10	= 1
>10	= 2

+

Step 3

Acute disease effect score

If patient is acutely ill **and** there has been or is likely to be no nutritional intake for >5 days
Score 2

If unable to obtain height and weight, see reverse for alternative measurements and use of subjective criteria

Step 4

Overall risk of malnutrition

Add Scores together to calculate overall risk of malnutrition
Score 0 Low Risk Score 1 Medium Risk Score 2 or more High Risk

Step 5

Management guidelines

0 Low Risk Routine clinical care

- Repeat screening
Hospital – weekly
Care Homes – monthly
Community – annually
for special groups
e.g. those >75 yrs

1 Medium Risk Observe

- Document dietary intake for 3 days if subject in hospital or care home
- If improved or adequate intake – little clinical concern; if no improvement – clinical concern - follow local policy
- Repeat screening
Hospital – weekly
Care Home – at least monthly
Community – at least every 2-3 months

2 or more High Risk Treat*

- Refer to dietitian, Nutritional Support Team or implement local policy
- Improve and increase overall nutritional intake
- Monitor and review care plan
Hospital – weekly
Care Home – monthly
Community – monthly

* Unless detrimental or no benefit is expected from nutritional support e.g. imminent death.

All risk categories:

- Treat underlying condition and provide help and advice on food choices, eating and drinking when necessary.
- Record malnutrition risk category.
- Record need for special diets and follow local policy.

Obesity:

- Record presence of obesity. For those with underlying conditions, these are generally controlled before the treatment of obesity.

Re-assess subjects identified at risk as they move through care settings

See The 'MUST' Explanatory Booklet for further details and The 'MUST' Report for supporting evidence.

Step 2 – Weight loss score

Weight before weight loss (kg)

	SCORE 0 Wt Loss < 5%	SCORE 1 Wt Loss 5-10%	SCORE 2 Wt Loss > 10%
34 kg	<1.70	1.70 – 3.40	>3.40
36 kg	<1.80	1.80 – 3.60	>3.60
38 kg	<1.90	1.90 – 3.80	>3.80

16st 7lb	<12lb	12lb – 1st 9lb	>1st 9lb

Alternative measurements and considerations

Step 1: BMI (body mass index)

If height cannot be measured

- Use recently documented or self-reported height (if reliable and realistic).
- If the subject does not know or is unable to report their height, use one of the alternative measurements to estimate height (ulna, knee height or demispan).

If height & weight cannot be obtained

- Use mid upper arm circumference (MUAC) measurement to estimate BMI category.

Step 2: Recent unplanned weight loss

If recent weight loss cannot be calculated, use self-reported weight loss (if reliable and realistic).

Subjective criteria

If height, weight or BMI cannot be obtained, the following criteria which relate to them can assist your professional judgement of the subject's nutritional risk category. Please note, use of these criteria is not designed to assign a score.

1. BMI

- Clinical impression – thin, acceptable weight, overweight. Obvious wasting (very thin) and obesity (very overweight) can also be noted.

2. Unplanned weight loss

- Clothes and/or jewellery have become loose fitting (weight loss).
- History of decreased food intake, reduced appetite or swallowing problems over 3-6 months and underlying disease or psycho-social/physical disabilities likely to cause weight loss.

3. Acute disease effect

- No nutritional intake or likelihood of no intake for more than 5 days.

Further details on taking alternative measurements, special circumstances and subjective criteria can be found in *The 'MUST' Explanatory Booklet*. A copy can be downloaded at www.bapen.org.uk or purchased from the BAPEN office. The full evidence-base for 'MUST' is contained in *The 'MUST' Report* and is also available for purchase from the BAPEN office.

Alternative measurements: instructions and tables

If height cannot be obtained, use length of forearm (ulna) to calculate height using tables below.
(See *The 'MUST' Explanatory Booklet* for details of other alternative measurements (knee height and demispan) that can also be used to estimate height).

Estimating height from ulna length

Measure between the point of the elbow (olecranon process) and the midpoint of the prominent bone of the wrist (styloid process) (left side if possible).

HEIGHT (m)	Men (<65 years)	1.94	1.93	1.91	1.89	1.87	1.85	1.84	1.82	1.80	1.78	1.76	1.75	1.73	1.71
	Men (>65 years)	1.87	1.86	1.84	1.82	1.81	1.79	1.78	1.76	1.75	1.73	1.71	1.70	1.68	1.67
	Ulna length (cm)	32.0	31.5	31.0	30.5	30.0	29.5	29.0	28.5	28.0	27.5	27.0	26.5	26.0	25.5
HEIGHT (m)	Women (<65 years)	1.84	1.83	1.81	1.80	1.79	1.77	1.76	1.75	1.73	1.72	1.70	1.69	1.68	1.66
	Women (>65 years)	1.84	1.83	1.81	1.79	1.78	1.76	1.75	1.73	1.71	1.70	1.68	1.66	1.65	1.63
HEIGHT (m)	Men (<65 years)	1.69	1.67	1.66	1.64	1.62	1.60	1.58	1.57	1.55	1.53	1.51	1.49	1.48	1.46
	Men (>65 years)	1.65	1.63	1.62	1.60	1.59	1.57	1.56	1.54	1.52	1.51	1.49	1.48	1.46	1.45
	Ulna length (cm)	25.0	24.5	24.0	23.5	23.0	22.5	22.0	21.5	21.0	20.5	20.0	19.5	19.0	18.5
HEIGHT (m)	Women (<65 years)	1.65	1.63	1.62	1.61	1.59	1.58	1.56	1.55	1.54	1.52	1.51	1.50	1.48	1.47
	Women (>65 years)	1.61	1.60	1.58	1.56	1.55	1.53	1.52	1.50	1.48	1.47	1.45	1.44	1.42	1.40

Estimating BMI category from mid upper arm circumference (MUAC)

The subject's left arm should be bent at the elbow at a 90 degree angle, with the upper arm held parallel to the side of the body. Measure the distance between the bony protrusion on the shoulder (acromion) and the point of the elbow (olecranon process). Mark the mid-point.

Ask the subject to let arm hang loose and measure around the upper arm at the mid-point, making sure that the tape measure is snug but not tight.

If MUAC is < 23.5 cm, BMI is likely to be <20 kg/m².

If MUAC is > 32.0 cm, BMI is likely to be >30 kg/m².

The use of MUAC provides a general indication of BMI and is not designed to generate an actual score for use with 'MUST'. For further information on use of MUAC please refer to *The 'MUST' Explanatory Booklet*.

Oral health assessment tool

Resident:

Completed by:

Date:

Scores – You can circle individual words as well as giving a score in each category
(* if 1 or 2 scored for any category please organise for a dentist to examine the resident)

0 = healthy 1 = changes* 2 = unhealthy*

Lips:

Smooth, pink, moist **0**
Dry, chapped, or red at corners **1**
Swelling or lump, white, red or ulcerated patch; bleeding or ulcerated at corners **2**

Dental pain:

No behavioural, verbal, or physical signs of dental pain **0**
There are verbal and/or behavioural signs of pain such as pulling at face, chewing lips, not eating, aggression **1**
There are physical pain signs (swelling of cheek or gum, broken teeth, ulcers), as well as verbal and/or behavioural signs (pulling at face, not eating, aggression) **2**

Natural teeth Yes/No:

No decayed or broken teeth or roots **0**
1–3 decayed or broken teeth or roots or very worn down teeth **1**
4+ decayed or broken teeth or roots, or very worn down teeth, or less than 4 teeth **2**

Oral cleanliness:

Clean and no food particles or tartar in mouth or dentures **0**
Food particles, tartar or plaque in 1–2 areas of the mouth or on small area of dentures or halitosis (bad breath) **1**
Food particles, tartar or plaque in most areas of the mouth or on most of dentures or severe halitosis (bad breath) **2**

Dentures Yes/No:

No broken areas or teeth, dentures regularly worn, and named **0**
1 broken area or tooth or dentures only worn for 1–2 hours daily, or dentures not named, or loose **1**
More than 1 broken area or tooth, denture missing or not worn, loose and needs denture adhesive, or not named **2**

Tongue:

Normal, moist roughness, pink **0**
Patchy, fissured, red, coated **1**
Patch that is red and/or white, ulcerated, swollen **2**

Gums and tissues:

Pink, moist, smooth, no bleeding **0**
Dry, shiny, rough, red, swollen, 1 ulcer or sore spot under dentures **1**
Swollen, bleeding, ulcers, white/red patches, generalised redness under dentures **2**

Saliva:

Moist tissues, watery and free flowing saliva **0**
Dry, sticky tissues, little saliva present, resident thinks they have a dry mouth **1**
Tissues parched and red, little or no saliva present, saliva is thick, resident thinks they have a dry mouth **2**

- Organise for resident to have a dental examination by a dentist
- Resident and/or family or guardian refuses dental treatment
- Complete oral hygiene care plan and start oral hygiene care interventions for resident
- Review this resident's oral health again on date:

With kind permission of the Australian Institute of Health and Welfare (AIHW). Source: AIHW Caring for oral health in Australian residential care (2009).
Modified from Kayser-Jones et al. (1995) by Chalmers (2004).

Paediatric Normal Values for Peak Expiratory Flow

PAEDIATRIC NORMAL VALUES

PEAK EXPIRATORY FLOW RATE

For use with EU/ EN13826 scale PEF meters only

Height (m)	Height (ft)	Predicted EU PEFR (Umin)		Height (m)	Height (ft)	Predicted EU PEFR (Umin)
0.85	2'9"	87		1.30	4'3"	212
0.90	2'11"	95		1.35	4'5"	233
0.95	3'1"	104		1.40	4'7"	254
1.00	3'3"	115		1.45	4'9"	276
1.05	3'5"	127		1.50	4'11"	299
1.10	3'7"	141		1.55	5'1"	323
1.15	3'9"	157		1.60	5'3"	346
1.20	3'11"	174		1.65	5'5"	370
1.25	4'1"	192		1.70	5'7"	393

Normal PEF values in children correlate best with height; with increasing age, larger differences occur between the sexes. These predicted values are based on the formulae given in Lung Function by J.E. Cotes (Fourth Edition), adapted for EU scale Mini-Wright peak flow meters by Clement Clarke.

Date of preparation - 7th October 2004

THE DISTRESS PASSPORT

Summary of signs and behaviours when content and when distressed

	When CONTENT	When DISTRESSED
APPEARANCE - Face: - Jaw & tongue: - Eyes: - Skin:	- Passive/smiling - Relaxed - Limited eye contact - Normal	- Grimace/frightened - Rigid - Screwed up/no eye contact - Normal
VOCAL SOUNDS - Sounds: - Speech:	- Low, short, laugh - Unclear, slow, soft	- High, short, cry out - Unclear, fast, loud
HABITS & MANNERISMS - Habits: - Mannerisms: - Comfortable distance:	- Fidgety - Relaxed arm movements - Close, only if known	- Rock back and forward - Clenching fists and arms of chair - No-one allowed close
POSTURE & OBSERVATIONS - Posture: - Observations:	- Jerky – able to adjust position - Normal pulse, steady breathing. Sleeping and eating habits are good but eats quickly.	- Rigid and tense - Fast pulse with rapid breathing. Broken sleeping pattern and increased appetite, favouring sugary foods and drinks.

Known triggers of distress (write here any actions or situations that usually cause or worsen distress):

Distress and Discomfort Assessment Tool

Please take some time to think about and observe the individual under your care, especially their appearance and behaviours when they are both content and distressed. Use these pages to document these.

We have listed words in each section to help you to describe the signs and behaviours. You can circle the word or words that best describe the signs and behaviours when they are content and when they are distressed.

Your descriptions will provide you with a clearer picture of their 'language' of distress.

COMMUNICATION LEVEL *	Ring their level when	well	unwell
This individual is unable to show likes or dislikes		Level 0	Level 0
This individual is able to show that they like or don't like something		Level 1	Level 1
This individual is able to show that they want more, or have had enough of something		Level 2	Level 2
This individual is able to show anticipation for their like or dislike of something		Level 3	Level 3
This individual is able to communicate detail, qualify, specify and/or indicate opinions		Level 4	Level 4

* This is adapted from the Kidderminster Curriculum for Children and Adults with Profound Multiple Learning Difficulty (Jones, 1994, National Portage Association).

FACIAL SIGNS

Appearance

What to do	Appearance when content	Appearance when distressed
Ring the words that best fit the facial appearance. Add your words if you want.	Passive Laugh Smile Frown Grimace Startled In your own words:	Passive Laugh Smile Frown Grimace Startled Frightened In your own words:

Jaw or tongue movement

What to do	Movement when content	Movement when distressed
Ring the words that best fit the jaw or tongue movement. Add your words if you want.	Relaxed Drooping Grinding Biting Rigid Shaking In your own words:	Relaxed Drooping Grinding Biting Rigid Shaking In your own words:

Appearance of eyes

What to do	Appearance when content	Appearance when distressed
Ring the words that best fit the appearance of the eyes. Add your words if you want.	Good eye contact Little eye contact Avoiding eye contact Closed eyes Staring Sleepy eyes 'Smiling' Winking Vacant Tears Dilated pupils In your own words:	Good eye contact Little eye contact Avoiding eye contact Closed eyes Staring Sleepy eyes 'Smiling' Winking Vacant Tears Dilated pupils In your own words:

BODY OBSERVATIONS: SKIN APPEARANCE

What to do	Appearance when content	Appearance when distressed
Ring the words that best fit the describe the appearance of the skin. Add your words if you want.	Normal Pale Flushed Sweaty Clammy In your own words:	Normal Pale Flushed Sweaty Clammy In your own words:

VOCAL SOUNDS (NB. The sounds that a person makes are not always linked to their feelings)

What to do	Sounds when content	Sounds when distressed
Ring the words that best describe the sounds Write down commonly used sounds (write it as it sounds; 'tizz', 'eeiow', 'tetetetete'): 	Volume: high medium low Pitch: high medium low Duration: short intermittent long Description of sound / vocalisation: Cry out Wail Scream laugh Groan / moan shout Gurgle In your own words:	Volume: high medium low Pitch: high medium low Duration: short intermittent long Description of sound / vocalisation: Cry out Wail Scream laugh Groan / moan shout Gurgle In your own words:

SPEECH

What to do	Words when content	Words when distressed
Write down commonly used words and phrases. If no words are spoken, write NONE		
Ring the words which best describe the speech	Clear Stutters Slurred Unclear Muttering Fast Slow Loud Soft Whisper Other, eg. swearing:	Clear Stutters Slurred Unclear Muttering Fast Slow Loud Soft Whisper Other, eg. swearing:

HABITS & MANNERISMS

What to do	Habits and mannerisms when content	Habits and mannerisms when distressed
Write down the habits or mannerisms, eg. "Rocks when sitting"	Fidgety with relaxed arm movements	Rocks back and forward when sitting, clench fists
Write down any special comforters, possessions or toys this person prefers.	Stress ball	Stress ball
Please Ring the statement which best describes how comfortable this person is with other people being physically close by	Close with strangers Close only if known No one allowed close Withdraws if touched	Close with strangers Close only if known No one allowed close Withdraws if touched

BODY POSTURE

What to do	Posture when content	Posture when distressed
Ring the words that best describe how this person sits and stands.	Normal Rigid Floppy Jerky Slumped Restless Tense Still Able to adjust position Leans to side Poor head control Way of walking: Normal / Abnormal Other:	Normal Rigid Floppy Jerky Slumped Restless Tense Still Able to adjust position Leans to side Poor head control Way of walking: Normal / Abnormal Other:

BODY OBSERVATIONS: OTHER

What to do	Observations when content	Observations when distressed
Describe the pulse, breathing, sleep, appetite and usual eating pattern, eg. eats very quickly, takes a long time with main course, eats puddings quickly, "picky".	Pulse: Normal limits Breathing: Steady Sleep: Uninterrupted Appetite: Good Eating pattern: Eats quickly	Pulse: Fast Breathing: Rapid Sleep: Broken Appetite: Increased Eating pattern: Eats quickly and favours sugary food and drink

Information and Instructions

DisDAT is

Intended to help identify distress cues in individuals who have severely limited communication.

Designed to describe an individual's usual content cues, thus enabling distress cues to be identified more clearly.

NOT a scoring tool. It documents what many carers have done instinctively for many years thus providing a record against which subtle changes can be compared.

Only the first step. Once distress has been identified the usual clinical decisions have to be made by professionals.

Meant to help you and the individual in your care. It gives you more confidence in the observation skills you already have, which in turn will give you more confidence when meeting other carers.

When to use DisDAT

When the carer believes the individual is NOT distressed

The use of DisDAT is optional, but it can be used as a

- baseline assessment document
- transfer document for other carers.

When the carer believes the individual IS distressed

If DisDAT has already been completed it can be used to compare the present signs and behaviours with previous observations documented on DisDAT. It then serves as a baseline to monitor change.

If DisDAT has not been completed:

- a) When the person is well known DisDAT can be used to document previous content signs and behaviours and compare these with the current observations
- b) When the person is new to a carer, or the distress is new, DisDAT can be used document the present signs and behaviours to act a baseline to monitor change.

How to use DisDAT

1. **Observe the individual** when content and when distressed- document this on the inside pages. *Anyone* who cares for them can do this.
2. **Observe the context** in which distress is occurring.
3. **Use the clinical decision distress checklist** on this page to assess the possible cause.
4. **Treat or manage** the likeliest cause of the distress.
5. **The monitoring sheet** is a separate sheet, which will help if you want to observe a pattern of distress or see how the distress changes over time. It's use is optional. There are three types to choose from the website- use whichever suits you best.
6. **The goal** is a reduction the number or severity of distress signs and behaviours.

Remember

- Most information comes from several carers together.
- The assessment form need not be completed all at once and may take a period of time.
- Reassessment is essential as the needs may change due to improvement or deterioration.
- Distress can be emotional, physical or psychological. What is a minor issue for one person can be major to another.
- If signs are recognised early then suitable interventions can be put in place to avoid a crisis.

Clinical decision distress checklist

Use this to help decide the cause of the distress

1. Is the sign repeated rapidly?

If in time with breathing: see 2 below.

If it comes and goes every few minutes: consider colic (bowel, bladder or period pain).

Consider: repetitive movement due to boredom or fear.

2. Is the sign associated with breathing?

Consider: rib damage or irritation of the lung's outer membrane (this will need a medical assessment).

3. Is the sign worsened or precipitated by movement?

Consider: movement-related pains.

4. Is the sign related to eating?

Consider: food refusal through illness, fear or depression, swallowing problems or nausea.

Consider: poor oral hygiene, indigestion or abdominal problems.

5. Is the sign related to a specific situation?

Consider: frightening or painful situations.

6. Is the sign associated with vomiting?

Consider: causes of nausea and vomiting.

7. Is the sign associated with passing urine or faeces?

Consider: urine infection or retention, diarrhoea, constipation, anal problems.

8. Is the sign present in a normally comfortable position or situation?

Consider: anxiety, depression, pains at rest (eg. colic, neuralgia), infection, nausea.

If you require any help or further information regarding DisDAT please contact:

Lynn Gibson and Dorothy Matthews on

Dorothy.Matthews@cntw.nhs.uk

or Claud Regnard claudregnard@stoswaldsuk.org

but it is never silent**

MODERATE

UNIVERSAL PAIN ASSESSMENT TOOL

This pain assessment tool is intended to help patient care providers assess pain according to individual patient needs. Explain and use 0-10 Scale for patient self-assessment. Use the faces or behavioral observations to interpret expressed pain when patient cannot communicate his/her pain intensity.

Braden Risk Assessment Chart

Braden Risk Assessment Chart					
Patient Name:			Evaluator's Name:		Date:
					Score:
Sensory Perception - Ability to respond meaningfully to pressure related discomfort	1. Completely Limited Unresponsive (does not moan, flinch or grasp) to painful stimuli, due to diminished level of consciousness or sedation. OR limited ability to feel pain over most of body surface.	2. Very Limited Responds only to painful stimuli. Cannot communicate discomfort except by moaning or restlessness. OR has a sensory impairment that limits the ability to feel pain or discomfort over ½ of body.	3. Slightly Limited Responds to verbal commands but cannot always communicate discomfort or need to be turned. OR has some sensory impairment that limits ability to feel pain or discomfort in 1 or 2 extremities.	4. No Impairment Responds to verbal commands. Has no sensory deficit that would limit ability to feel or voice pain or discomfort	
Moisture - Degree to which skin is exposed to moisture	1. Constantly Moist Skin is kept moist almost constantly by perspiration, urine, etc. Dampness is detected every time patient/ client is moved or turned.	2. Very Moist Skin is often, but not always, moist. Linen must be changed at least once a shift.	3. Occasionally Moist Skin is occasionally moist, requiring an extra linen change approximately once a day.	4. Rarely moist Skin is usually dry. Linen only requires changing at routine intervals.	
Activity - Degree of physical activity	1. Bedfast Confined to bed	2. Chairfast Ability to walk severely limited or non-existent. Cannot bear own weight and/or must be assisted into chair or wheelchair.	3. Walks Occasionally Walks occasionally during day, but for very short distances, with or without assistance. Spends majority of each shift in bed or chair.	4. Walks Frequently Walks outside the room at least twice a day and inside the room every 2 hours during waking hours.	
Mobility - Ability to change and control body position	1. Completely Immobile Does not make even slight changes in body or extremity position without assistance.	2. Very Limited Makes occasional slight changes in body or extremity position but unable to make frequent or significant changes independently.	3. Slightly Limited Makes frequent though slight changes in body or extremity position independently.	4. No Limitations Makes major and frequent changes in position without assistance.	
Nutrition - Usual food intake pattern	1. Very Poor Never eats a complete meal. Rarely eats more than 1/3 of any food offered. Eats 2 servings or less of protein (meat or dairy products) per day. Takes fluids poorly. Does not take a liquid dietary supplement. OR is NPO and/or maintained on clear liquids or IV's for more than 5 days.	2. Probably Inadequate Rarely eats a complete meal and generally eats only about ½ of any food offered. Protein intake includes only 3 servings of meat or dairy products per day. Occasionally will take a dietary supplement. OR receives less than optimum amount of liquid diet or tube feeding.	3. Adequate Eats over half of most meals. Eats a total of 4 servings of protein (meat, dairy products) each day. Occasionally will refuse a meal, but will usually take a supplement if offered. OR is on a tube feeding or TPN regimen which probably meets most of nutritional needs.	4. Excellent Eats most of every meal. Never refuses a meal. Usually eats a total of 4 or more servings of meat and dairy products. Occasionally eats between meals. Does not require supplementation	
Friction and Shear	1. Problem Requires moderate to maximum assistance in moving.	2. Potential Problem Moves feebly or requires minimum assistance. During a move, skin probably slides to some extent against sheets, chair restraints, or other devices. Maintains relatively good position in chair or bed most of the time, but occasionally slides down.	3. No Apparent Problem Moves in bed and in chair independently and has sufficient muscle strength to lift up completely during move. Maintains good position in bed or chair at all times.

Phlebitis Score

Phlebitis Score

All patients with an intravenous access device should have the IV site checked every shift for signs of infusion phlebitis. The subsequent score and action(s) taken (if any) must be documented on the cannula record form.

The cannula site must also be observed:

- When bolus injections are administered
- IV flow rates are checked or altered
- When solution containers are changed

Venous thromboembolism: diagnosis and anticoagulation treatment

2-level DVT Wells score	
Clinical feature	Points
Active cancer (treatment ongoing, within 6 months, or palliative)	1
Paralysis, paresis or recent plaster immobilisation of lower extremities	1
Recently bedridden for 3 days or more, or major surgery within 12 weeks requiring general or regional anaesthesia	1
Localised tenderness along the distribution of the deep venous system	1
Entire leg swollen	1
Calf swelling at least 3 cm larger than asymptomatic side	1
Pitting oedema confined to the symptomatic leg	1
Collateral superficial veins (non-varicose)	1
Previously documented DVT	1
An alternative diagnosis is at least as likely as DVT	-2
DVT likely: 2 points or more DVT unlikely: 1 point or less	
TOTAL SCORE:	

Do not stop short-term anticoagulation when used for primary VTE prevention in people with COVID-19

See the [recommendations on VTE prophylaxis in the NICE guideline on managing COVID-19](#)

¹Laboratory or point-of-care test. Consider age-adjusted threshold for people over 50
²Note that only one D-dimer test is needed during diagnosis
³Measure baseline blood count, renal and hepatic function, PT and APTT but start anticoagulation before results available and review within 24 hours
⁴If possible, choose an anticoagulant that can be continued if DVT confirmed
⁵Direct-acting anticoagulants and some LMWHs are off label for use in suspected DVT. Follow [GMC guidance on prescribing unlicensed medicines](#)
